

ABSTRACT OF THE DISCLOSURE

A ground anchor device used for holding a ladder in place on a ground surface and next to a wall of a building. Also, the ground anchor device can be used for holding other objects in place and used as a wench or come-along. The anchor device includes a ground spike assembly adapted for receipt into the top of the ground surface. An upper end of the ground spike assembly is pivotally attached to one end of a spike mounting plate. A ratchet mounting plate is pivotally attached to an opposite end of the spike mounting plate. A ratchet assembly is mounted on an opposite end of the ratchet mounting plate. The ratchet assembly includes a ratchet wheel with ratchet strap wrapped therearound. The ratchet assembly includes a ratchet handle for tightening and loosening said ratchet strap on said ratchet wheel. One end of the ratchet strap is attached to a hook. The hook and ratchet strap are adapted for wrapping around a portion of a ladder and other objects and holding them in place.
